

August 2015
Draft Land Management / Natural Resources Summary
Southern Kettle Moraine Waters Planning Group

Habitat Management

A habitat management classification is to provide or enhance habitat, whether upland, wetland or aquatic, to support specific species of plants or animals. Habitats and communities in areas with this designation may be managed for a wide variety of purposes, including focused species production and protection. Areas that initially do not have desired habitat conditions but have a high potential to be restored to those conditions may be included under this classification

Native Community Management

A native community management classification is to represent, restore and perpetuate native plant and animal communities, whether upland, wetland or aquatic, and other aspects of native biological diversity. Areas that initially do not have the desired community conditions but have a reasonable potential to be restored to those conditions may be included under this classification.

Recreation Management

A recreation management classification is to provide and maintain land and water areas and facilities for outdoor public recreation or education.

August 2015
Draft Land Management / Natural Resources Summary
Southern Kettle Moraine Waters Planning Group
